PROFESSIONAL SUMMARY

Senior Android Developer with over 6 years of hands-on experience building scalable, maintainable, and high-performance mobile applications across fintech, telemedicine, IoT, and enterprise domains. Proficient in Kotlin and Java with deep expertise in Clean Architecture, MVVM, MVI, Jetpack Compose, and Reactive Programming (RxJava/Coroutines). Demonstrated ability to modernize legacy codebases, integrate complex hardware SDKs (Bluetooth/IoT), and lead cross-functional engineering efforts. Consistent track record of delivering production-grade applications to end users through Play Store and internal deployment pipelines.

TECHNICAL SKILLS

Languages:	Kotlin, Java, Dart (Flutter)
Architecture & Patterns:	Clean Architecture, MVVM, MVI, Modular Architecture, SOLID Principles
Frameworks & Jetpack:	Android SDK, Jetpack Compose, ViewModel, LiveData, Navigation Component, Paging 3
Async & Reactive:	Kotlin Coroutines, RxJava, Flow
Dependency Injection:	Dagger/Hilt, Koin
Networking & Storage:	Retrofit, OkHttp, Room Database, DataStore, RESTful APIs
Hardware Integration:	Bluetooth (BLE & Classic), Telpo SDK, ML Kit (LPR), Vending Machine
CI/CD & DevOps:	Git, GitHub, Firebase (Crashlytics, Analytics, FCM), Play Store Deployment
Project Management:	Agile/Scrum, JIRA, ClickUp, OpenProject, Slack

PROFESSIONAL EXPERIENCE

Senior Android Developer | PT Appsku Aplikasi Indonesia

Mar 2024 - Present

- Spearheaded the migration of a legacy Java codebase to Kotlin with a Modular Architecture, significantly improving build speed, code maintainability, and team scalability.
- Architected and implemented new feature modules following Clean Architecture principles, decoupling business logic from the UI and data layers.
- Reduced memory consumption and improved cold start time through systematic profiling, lazy initialization, and coroutine-based concurrency optimizations.
- Served as the primary technical liaison between product management and UI/UX design, translating business requirements into well-defined engineering tasks.

Senior Android Developer | PT Amanah Karya Indonesia

Aug 2023 - Feb 2024

- Designed and implemented the Modular Architecture for My TMMIN Android (Toyota Manufacturing Indonesia), establishing a scalable project structure and shared Base Class layer with ViewBinding support.
- Modernized dependency management using BuildSrc Kotlin DSL, upgrading all libraries to stable versions and eliminating version conflict risks across modules.
- Built a Reactive Architecture using RxJava 2 and Retrofit for consistent, observable data stream handling across all API-driven features.
- Optimized third-party SDK integrations, resolving stability bottlenecks that had impacted internal stakeholder daily operations.

Mid Android Developer | PT Sehat Digital Nusantara (Alteacare)

Sep 2021 - Aug 2023

- Contributed to the core development of the Alteacare Telemedicine platform using ReactiveX (RxJava) and Android Architecture Components, delivering features including e-Pharmacy (Drug Store), digital voucher management, and post-teleconsultation workflows.

- Managed end-to-end Play Store release cycles via Play Console including staged rollouts, release notes, and production monitoring.
- Monitored production stability via Firebase Crashlytics and proactively resolved user-reported issues, maintaining a consistently high crash-free session rate.
- Used Git and GitHub for version control, conducting code reviews and enforcing branching strategy across the engineering team.

Senior Android Developer | PT Langitpay Digital Indonesia

Oct 2018 - Sep 2021

- Led the design and development of the Langitpay Ecosystem including Boss Bayar (PPOB/Payment Point Online Bank), Marketplace, and Attendance Management - serving thousands of active field agents.
- Engineered an offline-first synchronization layer using Room Database and WorkManager, ensuring transaction continuity in low-connectivity environments.
- Drove the incremental migration of Java modules to Kotlin and enforced adoption of Android Architecture Components across the engineering team.
- Integrated real-time push notification services (FCM) to improve operational responsiveness for field agents processing payments on-site.

PART-TIME & FREELANCE EXPERIENCE

Flutter Mobile Developer (Freelance) | CV Koding Data Artifisial

Apr 2025 - Jul 2025

- Developed an HRIS (Human Resource Information System) mobile application using Flutter, covering core HR workflows including attendance tracking, reimbursement submission, and cash advance request management.
- Built cross-platform UI components using Flutter widgets, ensuring consistent experience across Android and iOS targets from a single codebase.
- Integrated RESTful APIs for data submission and retrieval across all HRIS modules, handling authentication, form validation, and real-time status updates.

Android Instructor (Facilitator) | PT Lentera Bangsa Benerang

Part-Time

- Designed and delivered structured Android development curriculum from beginner to intermediate level, guiding students through practical, project-based learning.

Android Developer (Freelance) | PT Usaha Bersama Kami (Uberkah)

Freelance

- Built a PPOB Android application with full payment API integration and Bluetooth thermal printer support for on-the-spot receipt generation.

NOTABLE TECHNICAL PROJECTS

Aku MPOS Premium - Mobile Point of Sale

Tech Stack: Kotlin, Java, Telpo SDK, IMIN SDK, MVVM, Clean Architecture

- Engineered a production Mobile POS system for specialized Telpo and iMin hardware, integrating peripheral device SDKs to control receipt printers and barcode scanners.
- Implemented streamlined IoT integration entirely via optimized RESTful APIs and local IP network synchronization, guaranteeing high data persistence and seamless communication.
- Applied a hybrid architecture strategy to progressively modernize the legacy codebase while preserving hardware-specific compatibility.

Retribusi Parkir - Smart Parking System

Tech Stack: Kotlin, ML Kit, Bluetooth, Coroutines

- Built a real-time parking fee collection system leveraging ML Kit for automated License Plate Recognition (LPR), reducing manual input errors at entry/exit points.
- Integrated Bluetooth thermal printing for instant receipt issuance and implemented live data synchronization for parking occupancy monitoring.

My TMMIN Android – Toyota Internal Application

Tech Stack: Kotlin, Modular Architecture, RxJava 2, Retrofit, ViewBinding, BuildSrc

- Architected and implemented a scalable Modular Architecture for Toyota Manufacturing Indonesia's internal application, establishing a shared Base Class layer with ViewBinding support.
- Modernized dependency management using BuildSrc Kotlin DSL to eliminate version conflict risks and optimized third-party SDK integrations to resolve operational bottlenecks.

Alteacare – Telemedicine Platform

Tech Stack: Java, Kotlin, ReactiveX (RxJava), Android Architecture Components, Moengage, Github Action, Firebase

- Contributed to the core development of the telemedicine platform, delivering high-impact features including e-Pharmacy (Drug Store), digital voucher management, and post-teleconsultation workflows.
- Managed end-to-end Play Store release cycles and maintained high production stability through proactive monitoring via Firebase Crashlytics.

Langitpay Aplikasi

Tech Stack: Java, Kotlin, Room Database, WorkManager, Firebase Cloud Messaging (FCM)

- Led the design and incremental Java-to-Kotlin modernization of a high-traffic PPOB (Payment Point Online Bank) and marketplace platform serving thousands of active field agents.
- Engineered a robust offline-first synchronization layer using Room Database and WorkManager to guarantee transaction continuity in low-connectivity environments.

EDUCATION

Bachelor of Science in Informatics Engineering

2015 - 2021

Universitas Pamulang

Diploma in Office Administration

2012 - 2015

SMK Al-Hidayah Cinere

CERTIFICATIONS

- Android Basic Developer - Dicoding (2021-2024)
- SOLID Programming Principles - Dicoding (2021-2024)
